## DETAILED ACTION

### *Drawings*

1. New corrected drawings are required in this application because the current drawings are not clear and presentable. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:  
  
(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
3. Claims 1-67 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koeppel (US006477575B1) and in view of Lambert et al. (US006038601A).
4. With regard to *claims 1, 12, 23, 34, 45, 55 and 65-67*, Koeppel reference discloses,
  - *a data manipulation server (module 110) for disposing in-line between the client equipment unit and the content providing server, the data*

*manipulation server being coupled to a data store arranged to store data relating to a user of the client equipment unit; wherein (col.6, lines 43-47; sheet 1, fig.1).*

- *the data manipulation server is adapted to modify web-related data communicated between the client equipment unit and the content providing server using a predetermined amount of the data relating to the user in response to a request for obtaining the web content being transmitted from the client equipment unit (col.1, lines 7-10; col. 2, lines 41-49; sheet 4, fig.5).*

However, Koeppel reference does not explicitly disclose,

- *a client equipment unit capable of communicating with a content providing server for providing web content;*

Lambert teaches,

- *a client equipment unit capable of communicating with a content providing server for providing web content; (col.1, lines 52-54; col.5, lines 51-60; sheet 1, fig.1A; sheet 3, fig. 2; sheet 4, fig. 3).*

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to combine Lambert reference with Koeppel reference to enable content providers a large amount of control over their own data and how it is presented. Content providers can supply their own graphics, advertising, ticker information, animation control, and content refresh parameters. Also, in order to gain new, or retain existing, customers,

providers need to ensure they present products and services that potential consumers are interested in. Accordingly, the importance of target advertising and target content provision has become an important role in the way providers conduct business over the Internet.

5. With regard to *claims 2-3, 13-14, 24-25, 35-36, 46-47 and 56-57*, Koeppel and Lambert references disclose the invention substantially as claimed,

See *claims 1, 12, 23, 34, 45 and 55* rejection as detailed above.

Furthermore, Koeppel and Lambert references disclose,

- *wherein the web related data is data relating to a protocol*
- *wherein the protocol is a Hyper Text Transfer Protocol (HTTP)* (Koeppel, col.1, lines 41-42; Lambert col.1, lines 17-20; col. 5, lines 20-26).

6. With regard to *claims 4-5, 15-16, 26-27, 37-38, 48-49 and 58-59*, Koeppel and Lambert references disclose the invention substantially as claimed,

See *claims 1, 12, 23, 34, 45 and 55* rejection as detailed above.

Furthermore, Koeppel and Lambert references disclose,

- *wherein the web related data is the web content*
- *wherein the web content is Hyper Text Mark-up Language (HTML) data* (Koeppel, col.1, lines 43-49; Lambert col.9, lines 46-47).

7. With regard to *claims 6-8, 17-19, 28-30, 39-41, 50-52 and 60-62*, Koeppel and Lambert references disclose the invention substantially as claimed,

See *claims 1, 12, 23, 34, 45 and 55* rejection as detailed above.

Furthermore, Koeppel reference discloses,

- *wherein the data relating to the user is static data*
- *wherein the static data is obtained from the user* (Koeppel, col. 4, lines 32-38; col.7, lines 49-58).
- *wherein the static data is obtained from a content provider associated with the web content* (Koeppel, col. 4, lines 32-38; col.7, lines 49-58).

8. With regard to *claims 9-10, 20-21, 31-32, 42-43, 53-54 and 63-64*, Koeppel and Lambert references disclose the invention substantially as claimed,

See *claims 1, 12, 23, 34, 45 and 55* rejection as detailed above.

Furthermore, Koeppel reference discloses,

- *wherein the data relating to the user is dynamic data*
- *wherein the dynamic data is obtained from an access provider associated with supporting communications between the client equipment unit and the content providing server* (Koeppel, col.4, lines 7-12, lines 32-38, lines 39-45).

9. With regard to *claims 11, 22, 33 and 44*, Koeppel and Lambert references disclose the invention substantially as claimed,

See *claims 1, 12, 23, 34, 45 and 55* rejection as detailed above.

Furthermore, Lambert reference discloses,

- *wherein the data manipulation server is a proxy server* (Lambert, col. 5, lines 45-53; module 304 on sheet 3, fig.2, module 204 on sheet 4, fig.3).
